Crypostle is an experimental new digital currency that enables public or private, instant payments to anyone, anywhere in the world. Crypostle uses peer-to-peer technology to operate with no central authority: managing transactions and issuing money are carried out collectively by the network.

Using the Dash Core source code as a solid base; Crypostle Core implements a custom Dynamic Block Reward algorithm and strives to develop cutting-edge technology for blockchain solutions. Future plans include: Implementing a wallet to wallet RPC protocol, sidechain and decentralized application frameworks show casing easy to use graphical user interfaces supporting multi-signature transactions.

What is DBR 2.0?

Dynamic Block Reward 2.0 (C) 2017 Crypostle

Adjustments based on network hasrate, previous block difficulty

Simulating real bullion (gold/silver) mining: If the difficulty rate is low; using excessive work to produce low value blocks does not yield large return rates. When the ratio of difficulty adjusts and the network hashrate remains constant or declines; the reward per block will reach the maximum level and thus mining becomes very profitable. This algorithm is intended to discourage >51% attacks, or malicous miners and reward efforts of ALL miners on the network, in a fair and decentralized approach. It is also intended to act as an automatic inflation adjustment based on real network conditions.

- Minimum 1 CXP
- Maximum 50 CXP

What are some Crypostle Features?

- Symbol: CXP
- Premine: NO
- Instamine: NO
- ICO: NO
- Air drop: NO
- Max coins: 33 million
- Hashing Algorithm: X11 (DGW v3)
- CPU mining: YES
- GPU mining: YES
- ASIC mining: YES
- InstantSend: YES

- PrivateSend: YES
- Masternodes: YES
- Diff retarget: 1 hour
- Halving Interval: 1 year
- Block space: 2.5 minutes
- Maturity: 101 confirmations
- Max Block Size: 128 MB
- Subsidy Base: Dynamic Block Reward 2.0
- Masternode Reward: 20% (approx)
- Masternode Collateral: 10 000 CXP
- Static Protection: Hard-coded Checkpoints
- Dynamic Protection: Double-Spend, Flooding, Dynamic Checkpoints (P2P Consensus)
- BIP32 (HD Wallet)
- BIP44 (multi-coin)
- BIP39 (mnemonic)

Network Information:

- MAINNET P2P Port = 25220
- MAINNET RPC Port = 25221

- TESTNET P2P Port = 25222
- TESTNET RPC Port = 25223

- REGTEST P2P Port = 25224
- REGTEST RPC Port = 25225

Masternodes and pools are not working yet, Part of the Dash code has code that changes the sync status when the client can't connect to a masternode. I also can't setup a masternode because the wallet won't remain synced! I hope to fix this soon, and at the same time am wondering if CPU mining is best to remain the only way to mine CXP... thoughts

Why can't you send coins to other purses?

Those are still under construction

jiangivana wrote on Sat, 27 January 2018 06:31Why can't you send coins to other purses?

you probably need to add to addnode=54.37.233.45   to crypostle.conf
or in Debug console   addnode 54.37.233.45 add

Can I mine now?

But can not update the wallet
